XENO® 50-MINI SPOT-ON SOLUTION FOR TOPICAL ADMINISTRATION

Small Animal Exemption Scheme (SAES) product
Qualitative and quantitative composition 1 pipette contains: Active substance: Ivermectin 50 µg

Pharmaceutical form Spot-on solution for topical administration.

Clinical particulars

Target species: Small rabbits, guinea pigs, ferrets, rats, hamsters, mice, gerbils, chinchillas and other small rodents up to 1250 g body weight, and birds less than 666 g body weight.

Indications for use: Topical insecticidal and acaricidal spot-on solution. A simple and effective spot-on solution for prevention and treatment of common internal and external parasites of small mammals and birds. Applied to the skin, Xeno 50-mini is absorbed into the body and is particularly effective against the parasites which commonly cause ear disease in the rabbit and ferret, and the mites that cause skin disease in guinea pigs, rabbits and rodents, including mange in guinea pigs and the condition known as walking dandruff in rabbits. It is also effective against many of the parasites which cause skin and feather problems in birds.

The active substance ivermectin is a substance known as an endectocide because it kills parasites that cause infestation inside the body (endoparasites) as well as those living outside the body, on the skin (ectoparasites). Ivermectin is used in many species for the control of mites, roundworms and lice.

Contraindications: Do not use on animals other than those indicated. Serious reactions, including deaths, have been reported in dogs (especially Collies, Old English Sheepdogs and related breeds), tortoises and turtles treated with products containing the active substance.

This product is toxic to chelonians. Do not use in tortoises, turtles or related species.

Special warnings: Do not overdose.

If you are uncertain about the condition of your pet, consult a veterinary surgeon.

If symptoms persist, consult a veterinary surgeon.

Special precautions to be taken by the person administering the product to animals: Wash hands with soap and water following treatment.

Adverse reactions: Occasionally, central nervous system disorders, lethargy, inappetence, local irritation and/or hypersensitivity reactions may be observed. These signs may be more common in young animals. Should such a reaction occur, discontinue use and seek veterinary advice.

If you notice any serious effects or other effects not mentioned in this data sheet, please inform your veterinary surgeon.

Amounts to be administered and administration route: Topical insecticidal and acaricidal spot-on solution.

Each pipette contains 50 µg ivermectin. Each pipette contains approximately 15 drops. Each drop will deliver approximately 3.3 micrograms ivermectin.

Do not overdose. In order to apply a correct dosage it is essential to accurately weigh the animal. Your veterinary practice can help you to do this.

Avoid use in or around the eyes.

Holding the pipette firmly in one hand, twist off the cap.

Mammals: Using the dosage table, apply the correct number of drops or pipettes onto the skin on the back of the neck and down the spine.

Birds: Apply 1 drop (3.3 µg) per 15 g body weight under the feathers onto the skin of the back between the wings. For larger body weight birds apply 1 pipette per 222 g body weight.

For routine prevention of common ectoparasites this dose should be repeated monthly. For the treatment of an existing infestation, repeat doses are required two weeks and four weeks after the initial application.

XENO 50-Mini Spot on Dosage Guidelines				
Species	Body weight (g)		Amount to use	
	From	To	Drops	Pipette(s)
Small rabbits, guinea pigs, ferrets, rats, hamsters, mice, gerbils, chin- chillas, other small rodents (200-400 µg/kg)	25	50	3	-
	50	100	6	-
	100	150	9	-
	150	200	12	-
	200	250	15	1
	250	500	-	2
	500	750	-	3
	750	1000	-	4
	1000	1250	-	5
Birds (225 µg/kg)	1 drop per 15 g body weight 1 pipette per 222 g body weight			
(µg = microgram)				

Withdrawal period: For pet animals only. Do not use on animals intended for human consumption. Do not eat eggs from treated birds.

Pharmaceutical particulars

Special precautions for storage: Keep out of the sight and reach of children. Do not store above 25°C. Protect from direct sunlight.

Immediate packaging: Cartons containing 9 polypropylene tubes, each of 50 µg ivermectin.

Disposal: Discard remaining contents of any opened pipettes immediately following use. Dispose of waste materials in accordance with local requirements.

Further information *Manufacturer's authorisation number:* SAM 0011

For animal treatment only.

This product is not effective against ringworm. Ringworm is a skin disease which can be passed on from your pet to humans. If you think your pet may have ringworm, you should consult a veterinary surgeon.

List of Products by Active Ingredients

This index of non-proprietary names (active ingredients) is provided to enable users of the Compendium to identify the brand names of relevant products when only the non-proprietary names are known.

It should be noted that although different products may contain the same active ingredient this does not imply that they are equivalent in regard to bioavailability or therapeutic activity.

Some products contain a number of ingredients and it has not been possible in every instance to identify such products by a reference in this index to each ingredient.
