DIETS FOR PUPPIES & KITTENS

Your vet has suggested that your pet may benefit from this diet, for puppies and kittens – here is how diet can help.

These diets are made with high levels of fish and other marine ingredients.

Fish is a very high quality protein. Fish is highly digestible; low in saturated fats and is well-balanced, meaning it has the right mix of amino acids for the body's needs.

Fish is also a rich source of EPA and DHA omega-3 – essential fatty acids that supports brain and eye development and development of healthy coat, skin and joints.

Calcium and phosphorus levels have been adjusted for teeth and bone growth.

Large and giant breed puppy food is formulated with moderate energy and calcium content to support the development of healthy joints and skeleton and reduce the risk of accelerated growth or weight gain.
